

✓
Add the following claims:

1 ~~22~~ The computer program device of Claim 1, wherein the method steps further
2 comprise:

3 (e) if the first computer has accessed a secondary page, causing the second
4 computer to display the secondary page. ~~22~~

1 ~~32~~ The computer program device of Claim ~~2~~, wherein the method steps further
2 comprise:

3 in response to the second computer transmitting a valid code to the control site,
4 ~~62~~ downloading from the control site to the second computer an active control; and
5 executing steps (d) and (e) by instructing the active control to cause the second
6 page to be downloaded. ~~32~~

1 ~~23~~ The computer program device of Claim ~~3~~, wherein the method steps further
2 comprise;

3 if the first computer selects, on the first page, a pointer associated with a
4 hyperlink site, defining the hyperlink site to be the predetermined page and then repeating
5 steps (a)-(d). ~~42~~

1 ~~24~~ The computer program device of Claim ~~4~~, wherein the method steps further
2 comprise:

3 reporting to the first computer the status of the second computer displaying the
4 second page. ~~52~~

1 ~~25~~ The computer program device of Claim ~~5~~, wherein the method steps further
2 comprise:

3 in response to the entry of data by the first computer in connection with the first
4 page, electronically combining the data with the first page for simultaneous display
5 thereof.

Additional claims have been renumbered in accordance with Rule 126
IPC 1/23/00

1 ~~87~~ 267. The computer program device of Claim ~~6~~⁶, in combination with the digital
2 processing apparatus.

1 ~~8~~ 278. The combination of Claim ~~7~~⁷, in further combination with the computer network.

ba 1 ~~9~~ 288. A method for enabling a first computer to cause at least one second computer to
2 display a predetermined page from a computer network, the method comprising the steps of:
3 receiving a request for the predetermined page;
4 retrieving the predetermined page;
5 recognizing in the predetermined page pointers to other pages in the network;
6 rendering a first page from the predetermined page by encoding the recognized pointers
7 to point to a control site;
8 rendering a second page from the predetermined page by disabling the recognized
9 pointers;
10 transmitting the first page to the first computer; and
11 transmitting the second page to the second computer.

10 1 ~~29~~ 10. The method of claim ~~9~~⁸, further comprising the steps of:
2 receiving an encoded recognized pointer from the first computer, the encoded recognized
3 pointer identifying a secondary page in the network to which the recognized pointer
4 corresponding to the received pointer pointed in the predetermined page;
5 retrieving the secondary page;
6 recognizing in the secondary page pointers to other pages in the network;
7 rendering a third page from the secondary page by encoding the pointers recognized in
8 the secondary page to point to the control site;
9 rendering a fourth page from the secondary page by disabling the pointers recognized in
10 the secondary page;
11 transmitting the third page to the first computer; and
12 transmitting the fourth page to the second computer.
